

Designing and installing the  
Ambiance® Transitions Lighting System  
is as easy as 1-2-3...  
Follow these 5 easy steps  
for a complete installation:

There is no general “rule of thumb” when installing the Ambiance® Transitions Lighting System. Each installation has its own variations and challenges. However, there is a simple step-by-step procedure to follow which will make any installation easy and trouble-free.

1. Measure the length of your installation in linear feet and sketch your layout.
2. Order the appropriate materials as outlined in the “Quick Calculator” below.
3. Install the rail lengths using the required power feed and standoffs.  
**Don't forget to include any necessary connectors to enhance your installation.**
4. Install the lamps/ bulbs into each lampholder.
5. Place each lampholder on the rail, using the desired spacing, by clamping the lampholder fitter onto the rail as illustrated in the instruction sheet. Reinstall the cap onto the lampholder and tighten all screws once the lampholder position has been verified.

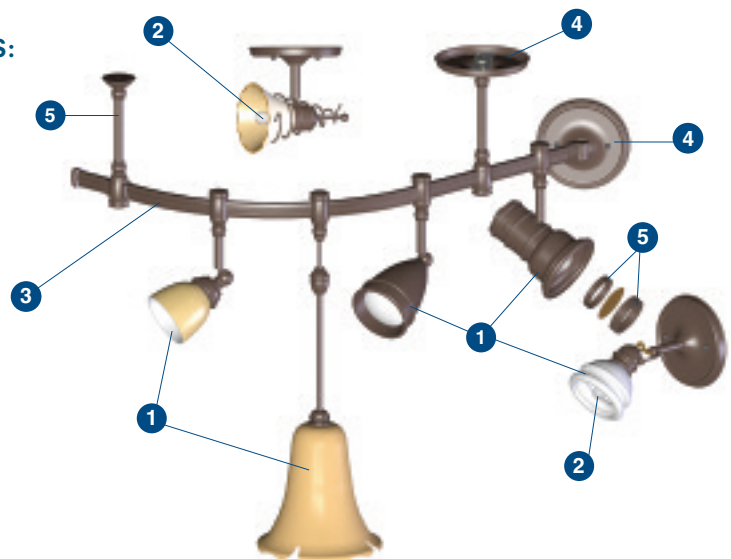

*Enjoy the effects of your new Ambiance® Transitions Lighting System!*

(Refer to the Ambiance® Transitions Lighting System Component Map)

Determine your Materials	Quantity	Item No.
(1) Record length of Ambiance® Transitions Lighting System rail needed.		
(2) Determine the number of rail sections (available in 4 and 8 foot lengths).		
(3) Determine the proper power feed.		
(4) Select the number and type of standoffs.		
(5) Select the quantity of lampholders needed.		
(5A) Select the corresponding lamps (if not included).		

**FOR A TRULY CUSTOMIZED SYSTEM  
SELECT FROM THE FIVE BASIC COMPONENTS:**

1. Luminaires
2. Lamps
3. Rail
4. Power Feed
5. Mounting and Other Accessories

**BE CREATIVE!!**

Add any applicable accessories,  
e.g., pendants, connectors, etc.
